[Lemon-Aid Used Cars and Trucks 2012-2013](#) Mar 19 2020 Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. U.S. automakers are suddenly awash in profits, and South Koreans and Europeans have gained market shares, while Honda, Nissan, and Toyota have curtailed production following the 2011 tsunami in Japan. Shortages of Japanese new cars and supplier disruptions will likely push used car prices through the roof well into 2012, so what should a savvy buyer do? The all-new Lemon-Aid Used Cars and Trucks 2012-2013 has the answers, including: More vehicles rated, with some redesigned models that don't perform as well as previous iterations downrated. More roof crash-worthiness ratings along with an expanded cross-border shopping guide. A revised summary of safety- and performance-related defects that are likely to affect rated models. More helpful websites listed in the appendix as well as an updated list of the best and worst "beaters" on the market. More "secret" warranties taken from automaker internal service bulletins and memos than ever.

**Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles** May 13 2022 The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

**Moments of Truth** Feb 27 2021 The current financial and sovereign debt crisis of the European Union and the United States can be regarded as the most recent of a wave of financial and sovereign debt crises that have affected different regions of the world over the past quarter century. While there is a large and growing body of literature on the economic aspects of financial crises, its political elements remain surprisingly understudied. Moments of Truth: The Politics of Financial Crises in Comparative Perspective fills this gap in the literature by looking at the political repercussions and policy implications of financial crises in comparative perspective, using case studies in Latin America, Korea, and Russia, as well as the contemporary crises in the US and in key European countries. Contributors to this volume look at the crises as critical junctures that generate high levels of uncertainty while calling for decisive action. The chapters emphasize structural or agency based explanations and give relevance to the role of ideas, interests, and institutions in explaining different outcomes. The questions addressed by the case studies include: how the crises were defined by key actors, the range of political and policy options available to deal with their impact, the role of ideas in policy shifts, how political and economic actors redefine their interests in contexts of uncertainty, how political institutions mediate reactions to the crises, what explains the choice of a certain option over other alternatives, and whether the crisis has (so far) resulted in significant political and policy changes or in incremental adjustments to the status quo. The first book to comparatively analyze the political dimensions of financial crises across different global regions, Moments of Truth will be highly significant for any scholars interested in the contemporary debate on financial crises.

**Badly Repaired Cars** Oct 26 2020 Beautiful Bentley's and Vauxhall van's are fixed in equally poor fashion in this book of quirky but poetic close ups of cars held together by tape and string from around the world. Ronni Campana, who specialises in powerful and detailed still life elevates the banal into something akin to abstract art. A strip of old tape across a car's broken headlight takes on a powerfully graphical form. Green plastic hanging from a door divides the frame like a Rothko colour wash. This is very much an art photography book but the accessible format, price and content give it mainstream potential.

**V2V/V2I Communications for Improved Road Safety and Efficiency** Jul 03 2021 Millions of automobile accidents occur worldwide each year. Some of the most serious are rear-end crashes, side crashes within intersections, and crashes that occur when cars change lanes or drift into a lane. The holy grail of traffic safety is to avoid automobile accidents altogether. To that end, major automakers, governments, and universities are working on systems that allow vehicles to communicate with one another as well as the surrounding infrastructure (V2V/V2I for short). These systems show promise for such functions as intersection assist, left-turn assist, do-not-pass warning, advance warning of a vehicle braking ahead, forward-collision warning, and blind-spot/lane-change warning. This compendium explores the challenges in developing these systems and provides the latest developments in V2V/V2I technology. It begins with a series of overview news stories and articles from SAE's magazines on the progress in this technology. This is followed by a series of technical papers on V2V/V2I dealing with the many technical aspects of design of these systems as well as discussions of such key issues as the need for extreme reliability assurances and traffic congestion overloads on the systems. Some of most interesting discussions in the book include: • Overview of a large-scale test in Germany to address reliability. • Effectiveness of different antennas and receivers that are used in various intersections settings, such as intersections where there are tall buildings or no buildings, and where high transmission power lines are located that can cause signal interference. • Various ways to communicate between vehicles and how messages are relayed to drivers. • Dedicated short range communication protocol for vehicle safety applications, which shows promise for combining and processing large amounts of

information. Editor Ronald K. Jurgen prepared this book to be of use to engineers at automakers and electronic component suppliers; software engineers; computer systems analysts and architects; academics and researchers within the electronics, computing, and automotive industries; legislators, managers and other decision-makers in the government highway sector; traffic safety professionals; and insurance and legal practitioners. Mr. Jurgen served on the editorial staff of IEEE Spectrum for 30 years and is the editor of several electronics-related handbooks and several other electronics-related compendiums published by SAE International.

**The Strategy Paradox** Nov 07 2021 A compelling vision. Bold leadership. Decisive action. Unfortunately, these prerequisites of success are almost always the ingredients of failure, too. In fact, most managers seeking to maximize their chances for glory are often unwittingly setting themselves up for ruin. The sad truth is that most companies have left their futures almost entirely to chance, and don't even realize it. The reason? Managers feel they must make choices with far-reaching consequences today, but must base those choices on assumptions about a future they cannot predict. It is this collision between commitment and uncertainty that creates THE STRATEGY PARADOX. This paradox sets up a ubiquitous but little-understood tradeoff. Because managers feel they must base their strategies on assumptions about an unknown future, the more ambitious of them hope their guesses will be right - or that they can somehow adapt to the turbulence that will arise. In fact, only a small number of lucky daredevils prosper, while many more unfortunate, but no less capable managers find themselves at the helms of sinking ships. Realizing this, even if only intuitively, most managers shy away from the bold commitments that success seems to demand, choosing instead timid, unremarkable strategies, sacrificing any chance at greatness for a better chance at mere survival. Michael E. Raynor, coauthor of the bestselling *The Innovator's Solution*, explains how leaders can break this tradeoff and achieve results historically reserved for the fortunate few even as they reduce the risks they must accept in the pursuit of success. In the cutthroat world of competitive strategy, this is as close as you can come to getting something for nothing. Drawing on leading-edge scholarship and extensive original research, Raynor's revolutionary principle of Requisite Uncertainty yields a clutch of critical, counter-intuitive findings. Among them: -- The Board should not evaluate the CEO based on the company's performance, but instead on the firm's strategic risk profile -- The CEO should not drive results, but manage uncertainty -- Business unit leaders should not focus on execution, but on making strategic choices -- Line managers should not worry about strategic risk, but devote themselves to delivering on commitments With detailed case studies of success and failure at Sony, Microsoft, Vivendi Universal, Johnson & Johnson, AT&T and other major companies in industries from financial services to energy, Raynor presents a concrete framework for strategic action that allows companies to seize today's opportunities while simultaneously preparing for tomorrow's promise.

**Mustang by Design** Mar 31 2021 p.p1 {margin: 0.0px 0.0px 0.0px 0.0px; font: 12.0px Arial} Without question, the 1964-1/2 Mustang is one of the most important and influential cars in automotive history. When Ford launched the Mustang, it created an automotive revolution. Award-winning designer and stylist Gale Halderman was at the epicenter of the action at Ford, and, in fact, his initial design sketch formed the basis of the new Mustang. He reveals his involvement in the project as well as telling the entire story of the design and development of the Mustang. Authors and Mustang enthusiasts James Dinsmore and James Halderman go beyond the front doors at Ford into the design center, testing grounds, and Ford facilities to get the real, unvarnished story. Gale Halderman offers a unique behind-the-scenes perspective and firsthand account of the inception, design, development, and production of the original Mustang. With stinging losses from the Edsel fresh in minds at Ford, the Mustang project was an uphill battle from day one. Lee Iacocca and his assembled team had a herculean task to convince Henry Ford II to take a risk on a new concept of automobile, but with the help of Hal Sperlich's detailed market research, the project received the green light. Henry Ford II made it clear that jobs were on the line, including Iacocca's, if it failed. The process of taking a car from sketch to clay model to prototype to preproduction and finally finished model is retraced in insightful detail. During the process, many fascinating experimental cars, such as the Mustang I two-seater, Mustang II prototype, Mustang Allegro, and Shorty, were built. But eventually the Mustang, based on the existing Ford Falcon, received the nod for final production. In a gala event, it was unveiled at the 1964 World's Fair in New York. The Mustang received public accolades and critical acclaim, and soon it became a runaway hit. After the initial success, Ford designers and Gale Halderman designed and developed the first fastback Mustangs to compliment the coupes. The classic Mustang muscle cars to follow, including the GT, Mach 1, and others, are profiled as well. The Mustang changed automotive history and ushered in the pony car era as a nimble, powerful, and elegantly styled sports coupe. But it could so easily have stumbled and wound up on the scrap pile of failed new projects. This is the remarkable and dramatic story of how the Mustang came to life, the demanding design and development process, and, ultimately, the triumph of the iconic American car.

**The Glass Cage** Oct 06 2021 In *The Glass Cage*, Pulitzer Prize nominee and bestselling author Nicholas Carr shows how the most important decisions of our lives are now being made by machines and the radical effect this is having on our ability to learn and solve problems. In May 2009 an Airbus A330 passenger jet equipped with the latest 'glass cockpit' controls plummeted 30,000 feet into the Atlantic. The reason for the crash: the autopilot had routinely switched itself off. In fact, automation is everywhere - from the thermostat in our homes and the GPS in our phones to the algorithms of High Frequency Trading and self-driving cars. We now use it to diagnose patients, educate children, evaluate criminal evidence and fight wars. But psychological studies show that we perform best when fully involved in a task, while the principle of automation - that humans are inefficient - is self-fulfilling. The glass cockpit is becoming a glass cage. In this utterly engrossing exposé, bestselling writer Nicholas Carr reveals how automation is affecting our ability to solve problems, forge memories and acquire skills. Rather than rejecting technology, Carr argues that we must urgently rethink its role in our lives, using it to enhance rather than diminish the extraordinary abilities that make us human.
